

SANJANA GHAREWAL

sanjanagharewal01@gmail.com | 9584103031 | linkedin.com/in/sanjana-gharewal-94b349237

Software Engineer with over 3 years of experience designing backend systems, **RESTful APIs**, and database-driven applications. Proficient in building scalable, high-performance solutions using modern **Python** frameworks and **JavaScript** for seamless full-stack integration. Skilled in **automating manual workflows**, processing complex datasets, and collaborating with cross-functional teams to deliver production-ready software.

TECHNICAL SKILLS

- **Languages & Web:** Python, JavaScript/OWL, Odoo ERP, jQuery, XML, HTML5, CSS.
- **Backend & Architecture:** RESTful & SOAP APIs, Queue Jobs, Multithreading, Service Workers (PWA).
- **Database & Tools:** PostgreSQL, GitLab, GitHub Actions, Git Submodules, Jira, Postman, GitHub Copilot.

PROFESSIONAL EXPERIENCE

Ksolves India Limited – Software Engineer

July 2023 – Present

Project: Cloud Radio Access Network (CRAN) Automation

An advanced automation platform designed to streamline and centralize telecom operations, automating critical workflows such as site planning, configuration management, file processing, and deployment tracking to significantly reduce manual effort and accelerates service delivery for telecom teams operating on a scale.

Key Responsibilities:

- Designed, developed, and maintained Python-based automation scripts and backend modules to optimize workflows, leveraging **REST APIs** for cross-system data exchange.
- Implemented multi-threaded task scheduling via **queue jobs** to offload heavy deployment processes, ensuring asynchronous execution.
- Engineered robust file-processing workflows using **Pandas**, **Openpyxl** and **Xlsxwriter** to automate the import, transformation, and export of complex datasets.
- Structured and optimized complex **SQL** queries to handle large-scale data retrieval while ensuring data integrity.
- Developed a secure user onboarding system, implementing authorization rules to restrict operational access while managing login validity and email approvals.

Project: Enterprise POS & ERP System

A modular enterprise platform designed to streamline transactions, bookings, memberships and operational workflows for hospitality and recreational businesses. The platform features offline-first POS transaction processing to ensure uninterrupted operations, fiscal-compliant order management, and real-time reservation and membership updates.

Key Responsibilities:

- Developed and optimized backend modules, implementing workflows, and system integrations using **SOAP APIs** for transaction and tax processing and **REST APIs** for real-time data updates.
- Engineered offline-first POS sessions with **Service Workers** for seamless operations during network outages and ensure automatic backend synchronization.
- Built dynamic frontend interfaces with JavaScript for intuitive dashboards and smooth backend interaction.
- Managed multi-module repositories using **Git submodules** and synchronize changes using **GitHub Actions**.

Ksolves India Limited – Software Developer Intern

Sept 2022 – July 2023

Gained hands-on development experience working with Python scripting, relational databases and web fundamentals. Collaborated with the team to author clean code, build API endpoints, and troubleshoot application bugs to improve overall system stability.

ACHIEVEMENTS

- Recognized as **Rising Star** (2023-24 & 2024-25) for consistent high-quality performance.
- Received **Spot Award** for special recognition and contributions.
- Recognized as **Star Performer** (2025-26) for sincere efforts and superior performance.

EDUCATION

Bachelor of Technology in Computer Science
Chameli Devi Group of Institutions, Indore

2019 – 2023
